OBD2 Auto Clean 3.0.2 License Key: Mesenchymal stem cells and mesenchymal stem cell-conditioned media promote articular chondrogenesis of ATDC5 cells. Bone marrow-derived mesenchymal stem cells (MSCs) and their secreted factors are currently a focus of research for the repair of cartilage defects, which is a critical problem in musculoskeletal medicine. Although it has been shown that MSCs promote chondrogenesis of chondrocytes derived from in vitro or in vivo sources, it is unclear whether they can also promote chondrogenesis of other cell types. The purpose of the present study was to investigate whether MSCs promote chondrogenesis of chondrogenic cells derived from the in vitro cell differentiation system. ATDC5 cells were used as chondrogenic cells and MSCs and MSC-conditioned media (MSC 82157476af
